AWS Cloud Quest
Cloud Practitioner

PROFESSIONAL SUMMARY

DevOps & Cloud Engineer with 3+ years of experience designing, deploying, and optimizing scalable cloud infrastructure, automated CI/CD pipelines, and highly available database architectures on AWS across FinTech and insurance domains. Hands-on expertise in AWS networking and security, including VPCs, subnets, security groups, and IAM; load balancing (ALB/ELB); Auto Scaling; and CI/CD tools such as Jenkins, GitLab CI/CD, and AWS CodePipeline. Proficient in database performance tuning, Python and Shell/Bash scripting, and zero-downtime production deployments. Experienced with monitoring and observability tools, including Prometheus, Grafana, ELK Stack, and AWS CloudWatch. Demonstrated results in reducing AWS costs by 60–70%, maintaining 99.9% uptime through Multi-AZ architectures, and reducing manual operational effort by 60% through automation. Strong background in production support, root cause analysis, incident resolution, and Agile delivery.

TECHNICAL SKILLS

AWS	EC2, S3, VPC, IAM, RDS, RDS Aurora, Lambda, ALB/ELB, Auto Scaling, Route 53, CloudWatch, CloudTrail, NAT Gateway, Multi-AZ, EKS, cost optimization
CI/CD & Release	Jenkins, GitLab CI/CD, AWS CodePipeline, deployment automation, release management, GitHub Actions
Scripting & OS	Python, Shell/Bash, Linux administration, configuration management, performance tuning
Networking & Security	VPC design, subnetting, route tables, VPC peering, load balancers, IAM, security groups, least-privilege access
Monitoring & Logging	AWS CloudWatch, log analysis, incident management, RCA
Databases	MS SQL Server, PostgreSQL, MySQL, T-SQL, PL/SQL, stored procedures, query optimization
Tools & Methodology	AWS Console, JIRA, Credly, Postman, UNIT / UAT & Regression Testing, Technical Documentation, VSCode

PROFESSIONAL EXPERIENCE

Total Experience: 6+ Years

Software Application Developer | Shipco IT Pvt Ltd — **Aug 2023 – Present**

- Developed full-stack applications using Angular, Node.js, MySQL, and AWS, delivering maintainable and scalable business solutions.
- Implemented service-oriented architecture using SOAP and REST services; collaborated with backend developers to design and integrate RESTful APIs.
- Built responsive user interfaces and single-page applications with Angular, and designed, developed, and maintained web applications using modern technologies.
- Worked with AWS services including S3, CloudWatch, and Serverless; integrated third-party libraries and RESTful APIs into application workflows.
- Debugged and optimized file-processing workflows using POD and Cron jobs, improving operational reliability and supportability.

Software Engineer | Novigo Solutions Pvt Ltd — **Oct 2021 – Jul 2023**

- Built and maintained enterprise-level user interface applications with a focus on usability, performance, and maintainability.
- Integrated APIs and managed frontend–backend communication to support reliable end-to-end application functionality.
- Conducted internal project showcases and supported release planning across development and delivery teams.
- Ensured application compliance with business requirements, technical standards, and quality expectations.

Project Trainee | Persistent Systems Pvt Ltd — **Dec 2019 – Dec 2020**

- Assisted in software development using Java and contributed to application implementation activities.
- Conducted testing and documentation across the project lifecycle, supporting quality and traceability.
- Supported debugging and performance improvements by investigating issues and validating fixes.

TRAINING

Software Trainee | BridgeLabz Solutions **May 2021 – Sept 2021**

- Completed industrial training in MERN stack development, building practical full-stack applications and strengthening software development fundamentals.
- Developed a Java-based Address Book application and a Fundoo Notes application with note-taking functionality inspired by Google Keep.
- Worked with Jenkins and AWS CodeDeploy for deployment; integrated PostgreSQL with REST APIs and implemented JWT tokens for authentication and security.
- Used HTML, JavaScript, Node.js, Express.js, React, HTTP requests, MongoDB, and Postman.

KEY PROJECTS

Production-Ready 3-Tier Web Application on AWS

EC2, VPC, RDS Aurora, ALB, CloudWatch | ReactorBee

- Architected and deployed a highly available 3-tier application with Multi-AZ architecture achieving 99.9% uptime.
- Designed a secure VPC with tier-based isolation: 5 security groups, 3 route tables, and least-privilege IAM roles.
- Achieved 60–70% AWS cost reduction via rightsizing, automated resource management, and idle-resource cleanup.

Load Balancer Configuration for Web Application

AWS, ALB, ELB, EC2, Auto Scaling | ReactorBee

- Implemented ELB with an EC2 Auto Scaling Group for dynamic traffic handling and high availability.
- Configured an ALB to distribute traffic across instances, improving fault tolerance and response times; monitored traffic patterns with CloudWatch to tune the configuration.

Static Website Deployment on AWS EC2 using Nginx

EC2, Nginx, Linux | ReactorBee

- Deployed a static website on EC2 with Nginx for secure, scalable hosting; configured a custom dark-mode UI and 404 error handling.
- Managed the Linux server end to end, including installation, configuration, and performance tuning.

VPC Peering & Network Optimization

VPC, Route Tables, Subnets, IGW | ReactorBee

- Implemented VPC peering for seamless communication between disparate cloud environments, with routing built on route tables, internet gateways, and subnets.
- Reduced latency and improved efficiency through optimized routing and post-implementation monitoring.

EDUCATION

BE, Computer Engineering | Pune University **May 2018**

Diploma, Computer Science | M.S.B.T.E **May 2015**

CERTIFICATES & BADGES

- AWS Cloud Quest: Cloud Practitioner – Training Badge
- AWS Educate Getting Started with Compute – Training Badge
- AWS Educate Getting Started with Serverless – Training Badge
- AWS Educate Getting Started with Storage – Training Badge

SELECTED ACHIEVEMENTS

- Reduced AWS costs by 60–70% through rightsizing, automated resource management, and idle-resource cleanup.
- Maintained 99.9% uptime through highly available Multi-AZ production architectures.
- Reduced manual operational effort by 60% through automation with Python and PL/SQL.
- Improved data quality and operational reliability through validation utilities, monitoring, and root cause analysis.
- Supported zero-downtime production deployments and release validation across business-critical systems.

CORE COMPETENCIES

DevOps Engineering • Cloud Engineering • AWS • CI/CD • Linux • Python • Shell/Bash • SQL Server • PostgreSQL • MySQL • PL/SQL • Agile/Scrum • UAT & Regression Testing • High Availability
